

Automated Intelligence to transform and migrate government department's data to Office 365

Automated Intelligence (AI) has secured a deal to transform over 250 TB of data at a large UK Non-ministerial department.

Customer Situation

The organisation realised it needed to update its working practices to ensure it can meet its obligations and continue as a leading UK Government department with modern and world-class systems.

Being an organisation with a great deal of legacy data, the department knew that it couldn't just "lift and shift" data to its chosen platform of Office 365, and that it needed to do something transformational to get that data across.

It also needed to ensure it was meeting regulatory requirements, such as the GDPR, and that all of the data it brought across was appropriate and had purpose.

Automated Intelligence Solution

Several unique capabilities led the department to choose **AI.DATALIFT** by Automated intelligence.

The data is held in multiple systems and **AI.DATALIFT** provides a fast data scan that will enable the organisation to understand the data that it holds, regardless of where it is, very rapidly. This will provide the foundation of the program, and support and accelerate policy decision and migration activity.

Customer Situation

One of the challenges with the data is that the department has created applications which cannot be moved directly into Office 365. It needs these to be understood and then treated in a matter which would, in time, allow it to reimagine those as Office 365 applications. **AI.DATALIFT** allows these business-developed applications to be identified, managed, and in many cases, migrated automatically.

Another challenge is that the Department has many linked Excel spreadsheets. Automated Intelligence is one of the only companies that, as part of the transformation process, lets organisations take across these linked spreadsheets and have them continue to work within Office 365, with no interruption for the users.

AI's unique cloud-based analytics and migration solution, **AI.DATALIFT**, leverages the latest innovations in data management technology which will enable the organisation to organise, consolidate, migrate and ultimately transform its data holdings.

Automated Intelligence will also employ Microsoft's Azure Data Box, capable of transfer speeds of up to 10Gb/s. This will significantly reduce the effort and risk associated with migration.

**CEO of Automated Intelligence
Simon Cole said,**

“ This is a landmark win for Automated Intelligence to move this department's data into Office 365.

Office 365 was chosen as the platform to provide the best productivity capability that would help drive a modern workplace for its staff, and we are delighted to play a part in this substantial government project. ”
