

# DIGITAL TRANSFORMATION IN THE HEALTH SECTOR

**What are the current challenges in the Health sector and how can digital transformation help?**

## **1 CHALLENGE: AGEING INFRASTRUCTURE**

Legacy infrastructure is ageing and coming to end of support, failing and introducing operational risk. Staff struggle to find, use and share the information required to serve patients.

## **2 CHALLENGE: CLINICAL DATA STORED IN THE WRONG PLACE**

If data is not stored and managed correctly, this can cause security and compliance issues such as loss of data, increased exposure to cyber attacks and costly GDPR or ISO penalties.

## **3 CHALLENGE: COST INEFFICIENCIES**

Our experience has proven that up to 70% of an organisations data is ROT - that is non-useful data which is Redundant, Obsolete or Trivial. Whilst at least 10% is duplicated. Much of it inaccessible and needlessly increasing storage costs.

## **4 OPPORTUNITY - DRIVE TO DIGITISATION**

Recent NHS initiatives provides the opportunity for Healthcare organisations to embrace technology, become paperless, enabling patients to have full access to their records while staff have access to the information they require.

Adopting and migrating to Microsoft 365 allows health organisations to digitise and migrate their records ensuring accessibility and a secure and compliant management.

## **5 OPPORTUNITY: INTELLIGENT MIGRATIONS**

Migrating to Microsoft 365 offers a secure collaboration space and everything an organisation needs to take control of their information in the future.

Your Healthcare organisation can benefit from:

- Increased data security and quality by managing patient and organisational data in Microsoft 365
- Make more informed, efficient decisions with easy access to digital records
- Free up space, reduce costs and increase productivity

To find out more on how we can help you take control of your data by intelligently migrating it to Microsoft 365, get in touch with us by emailing [sales@automated-intelligence.com](mailto:sales@automated-intelligence.com)
