Digital Transformation made simple

Features & Benefits Guide

AI.DATALIFT

AI's unique cloud-based analytics
and migration solution

**Automated
Intelligence**

AI.DATALIFT

Providing Insights and Governance over your unstructured data

AI.DATALIFT is a cloud-hosted, secure platform that enables organisations to catalogue valuable information assets, provide full discovery, categorisation, retention and defensible disposition to effectively remediate risk and help protect data across file shares and legacy on-premise EDRMS platforms.*

With powerful intuitive dashboards driven by advanced indexing and search against metadata and content, **AI.DATALIFT** provides visibility of business value, and risk, throughout the information management lifecycle.

*Platforms such as Meridio, Trim, OpenText, RKYV and Documentum

Discovery, Analysis & Insights

A real-time interactive dashboard that surfaces metrics across your data by analysing metadata and content.

Insights are used to profile your data to enable planning and decision-making based on value and risk discovered.

Data Cleanse & Remediate

Categorisation of duplicate, redundant, obsolete, and trivial data to report, and action across the business.

Policy application for fully-audited defensible disposition reduces volume, risk, and improves governance.

Migration Planning & Delivery

Visibility of security and sensitive information from your clean data estate provides a platform for migration planning and delivery.

Transfer and re-organise valuable data assets, at scale, without impacting business as usual.

Feature

AI.DATALIFT Benefits

Duplication Detection

Detecting exact duplicates, typically 10% of information volume, across all scanned data sources with metadata tagging for identification of original versions.

Data Categorisation

Enabling the business to understand and apply context to create a data catalogue of information assets to be mapped against regulatory taxonomies and business processes.

Policy Actions

Enabling a rules based approach for transferring or deleting content, with approval process and end-to-end auditing, for defensible disposition.

Pattern Matching

Identifying commercially and personally sensitive information based on OOTB and custom patterns to enhance the categorisation process and identify key areas of risk and value.

Security Access Discovery

Visibility of the access levels, including inheritance, orphaned and open-access to ensure high-risk and confidential information is protected appropriately.

Embedded Objects

Detecting embedded information i.e. spreadsheets in emails, documents & presentations, ensuring no risk or value is hidden from discovery and search.

Image to Text

Analysing digitalised content containing handwriting and images (i.e. scanned passports) with cloud-based machine learning models to support full discovery of risk i.e. personal sensitive information.

Delta Analysis

Ongoing analysis of changing data estate (new and modified information) providing visibility of legal and regulatory compliance for timely reporting across the business.

Excel Link Fixing

Ensuring continuity of work and accuracy within departments and teams reliant on linked Excel files.

Cloud Migration Staging

Staging area within secure cloud enabling fast migration to new platforms while circumnavigating infrastructure bottlenecks and minimising impact to business during migration go-live phases.

Pre-migration Issue Report

Visibility of the common issues encountered as part of migration projects to support pre & post action and product configuration for auto-remediation.
